intermediate compound for use in the production of the dihalopropene compound.

The present invention relates to a dihalopropene compound, and an insecticide/acaricide containing the dihalopropene compound as an active ingredient. It also relates to an intermediate compound for use in the production of the dihalopropene compound.

In the Japanese Patent Laid-open Publication Nos. 48-86835/1973 and 49-1526/74, it is disclosed that certain propene compounds can be used as an active ingredient of insecticides.

Moreover, the dihalopropene compounds of the present invention are also effective for controlling various insects with increased resistance to commercially available insecticides.

For the practical use of the dihalopropene compound of the present invention as an active ingredient of insecticides, acaricide or nematocides, it may be used as such; however, the dihalopropene compound of the present invention is usually formulated into oil sprays, emulsifiable concentrates, wettable powders, flowable concentrates such as water suspensions or emulsions, granules, dusts, aerosols, heating fumigants such as combustible fumigant, chemical fumigant and porous ceramics fumigant, ULV formulations and poison baits. These formulations are usually prepared by mixing the dihalopropene compound of the present invention with a solid carrier, a liquid carrier, a gaseous carrier or bait, and a surfactant and any other auxiliary for formulation are added thereto, if necessary. These formulations usually contain the dihalopropene compound of the present invention as an active ingredient in an amount of 0.01% to 95% by weight.

Examples of the solid carrier to be used for the formulation are fine powder or granules of clays such as kaolin clay, diatomaceous earth, synthetic hydrated silicon oxide, bentonite and acid clay; talc, ceramics, inorganic minerals such as sericite, quartz, sulfur, active carbon, calcium carbonate and hydrated silica; and chemical fertilizers such as ammonium sulfate, ammonium phosphate, ammonium nitrate, urea and ammonium chloride. Examples of the liquid carrier are water; alcohols such as methanol and ethanol; ketones such as acetone and methylethyl ketone; aromatic hydrocarbons such as benzene, toluene, xylene, ethylbenzene and methyl-naphthalene; aliphatic hydrocarbons such as hexane, cyclohexane, kerosene and gas oil; esters such as ethyl acetate and butyl acetate; nitriles such as acetonitrile and isobutyronitrile; ethers such as diisopropyl ether and dioxane; acid amides such as N,N-dimethylformamide and N,N-dimethylacetamide; halogenated hydrocarbons such as dichloromethane, trichloroethane and carbon tetrachloride; dimethyl sulfoxide; and vegetable oils such as soybean oil and cottonseed oil. Examples of the gaseous carrier or propellant are CFCs (chlorofluorocarbons), butane gas, LPG (liquefied petroleum gas),

diethyl ether and carbon dioxide.

Examples of the surfactant are alkyl sulfates, alkyl sulfonates, alkyl arylsulfonates, alkyl aryl ethers, polyethylene glycols, polyethylene glycol ethers, polyhydric alcohol derivatives and sugar alcohol derivatives.

5 Examples of the auxiliary for the formulation, such as a fixing agent or a dispersing agent, are casein, gelatin, polysaccharides such as starch, gum arabic, cellulose derivatives and alginic acid, lignin derivatives, bentonite, sugars and synthetic water-soluble polymers such as polyvinyl alcohol, polyvinyl pyrrolidone and polyacrylic acid. Examples of the stabilizer are PAP (isopropyl acid phosphate), BHT (2,6-di-*t*-butyl-4-methylphenol), BHA (mixture of 2-*t*-butyl-4-methoxyphenol and 3-*t*-butyl-4-methoxyphenol), vegetable oils,
10 mineral oils, surfactants, fatty acids and esters of fatty acids.

Examples of the base material to be used in the combustible fumigant are exothermic agents such as nitrates, nitrites, guanidine salts, potassium chlorate, nitrocellulose, ethylcellulose or wood powder; pyrolytic stimulating agents such as alkaline metal salts, alkaline earth metal salts, dichromates or chromates; oxygen sources such as potassium nitrates; combustion assistants such as melamine or wheat starch; bulk fillers
15 such as diatomaceous earth; and binding agents such as synthetic glue.

Examples of the base material to be used in the chemical fumigant are exothermic agents such as alkaline metal sulfides, polysulfides, hydrosulfides, hydrated salts or calcium oxide; catalytic agents such as carbonaceous substances, iron carbide or active clay; organic foaming agents such as azodicarbonamide, benzenesulfonylhydrazide, *N,N'*-dinitrosopentamethylenetetramine, polystyrene or polyurethane;
20 and fillers such as natural and synthetic fibers.

Examples of the base material to be used in the poison baits are bait materials such as grain powder, purified vegetable oil, sulfur or crystalline cellulose; antioxidants such as dibutylhydroxytoluene or *o*-dihydroguaiaretic acid; preservatives such as dehydroacetic acid; substances for preventing erroneous eating, such as red pepper powder; attractant flavors such as cheese flavor or onion flavor.

25 The flowable concentrates such as water suspensions and emulsions are usually obtained by finely dispersing the dihalopropene compound of the present invention at a ratio of 1% to 75% in water containing a 0.5% to 15% dispersing agent, a 0.1% to 10% suspension assistant (e.g., protective colloid or a thixotropy-giving compound) and 0% to 10% additives (e.g., antifoamers, stabilizers, bactericides, rust preventive agents, antimolds, developing agents, penetrating assistants and antifreezing agents).

30 The dihalopropene compound of the present invention may be dispersed in oil having substantially no solubility thereof, to form oil suspensions. Examples of the protective colloid are casein, gelatin, gums, cellulose ethers and polyvinyl alcohol. Examples of the thixotropy-giving compound are bentonite, aluminum magnesium silicate, xanthan gum or polyacrylic acid.

The formulation thus obtained is used as such or after dilution with water. The formulations of the
35 present invention may be used together with other insecticides, acaricides, nematocides, bactericides, herbicides, plant growth regulators, synergists, fertilizers and/or soil conditioners under non-mixing conditions or pre-mixing conditions.
